FOR IMMEDIATE RELEASE

New Shielding Seizure Pouches for Cell Phones

Chesterfield, MO, Jan. 2008

Marktek Inc. announces the introduction of three, new, enhanced versions of its lightweight, shielded, cell phone seizure pouches for law enforcement, security, and military agencies. To complement its present line of small, electronic device seizure pouches, the company now offers pouches that completely block the signals of 3G mobile phones. The re-sealable shielding pouches are constructed of layers of high quality, durable metallized fabrics, including metallized mesh that allows the option of a front side through which the keys/buttons of the seized device can be viewed and manipulated while inside the pouch. Other new, cell phone pouch styles now available from Marktek Inc. include a camouflaged version for soldiers in the field and a specially designed, hanging file version that comes with an attached, hanging cross bar for readily organized storage of small devices detained by police, security guards, etc..
